I think this problems is stemming from the fact that openvpn didn't properly create tun0 in the first place.

Executing:

```
openvpn --mktun tun --dev tun0
```

```
Wed Aug 19 18:40:27 2009 TUN/TAP device tun0 opened
```

```
Wed Aug 19 18:40:27 2009 Cannot ioctl TUNSETPERSIST(1) tun0: Operation not permitted  
(errno=1)
```

```
Wed Aug 19 18:40:27 2009 Exiting
```

How do I grant access to the container to execute:

```
ioctl TUNSETPERSIST(1) tun0
```
