---

Thank you.

This is my scenario(public ip is 193.19.x.y):

```
root@ubu01:~# hostname  
ubu01.domain.com
```

```
root@deb01:~# vzctl set 777 --nameserver 193.19.*.* --ip 192.168.1.1 --save
```

```
root@ubu01:~# vzlist -a  
  VEID   NPROC STATUS IP_ADDR   HOSTNAME  
   777     8 running 192.168.1.1 vps.ubu01.domain.com
```

Allow access from outside to inside vps port 80

```
iptables -t nat -A PREROUTING -p tcp -d 193.19.x.y --dport port_num -i eth0 -j DNAT  
--to-destination 192.168.1.1:80
```

Allow access from inside the vps to the outside internet

```
iptables -t nat -A POSTROUTING -s 192.168.1.1 -o eth0 -j SNAT --to 193.19.x.y
```

But it is not working. I don't have internet to/from container.

I did something wrong ?
