Hello I am trying to launch ejabberd into an VPS container but I can't get more than 1000 simultaneous connections after what ejabberd dies...i tried to modify VPS parametrs, increased different parametrs but after that ejabberd didn't launch. If needed I can provide the configuration of the VPS.

My kernel is 2.6.26-2-openvz-amd64

vzctl version 3.0.23-1dso1
