Hi,

thanks for the info.

I suppose we bumped into the similar problem there

http://forum.openvz.org/index.php?t=tree&th=4280&pa=ge_top

but we might reach it from the different side.

My second comment suggested that you may use nonpersistent mode. Unfortunately I cannot recall how to do it but if you want you can read OpenVPN documentation or search through the Google.

Anyway please read the topic mentioned above and you'll find a howto written by tomfra (Tomas France). I hope it will be helpful in your case.
