Subject: Re: Ubuntu dapper template, or upgrading debian stable to ubuntu
Posted by voidmain on Wed, 14 Jun 2006 02:59:14 GMT

I've tried both the Ubuntu templates and neither one seems to get the network up and running. I have configuration for both venet0 and venet0:0 but when I start the server only venet0 gets started up. The venet0:0, which contains the correct IP address (and I'm assuming is a slave of sorts) doesn't start. Anyone else have this issue and fixed it?
