Hi,

the Hostnode is running the RHEL based last stable OpenVZ Linux kernel, you can found the src on [http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s tab064.7/](http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s%20tab064.7/).

Btw, why are you need kernel src to build modules, you can't load any kmods in your container atn the hardware node or with special kernel capabilities given by the hostnode admins.

Bye,  
Thorsten
