Subject: inodes limitations? Disk quota exceeded, but no where near it? Posted by vivithemage on Sat, 19 Sep 2009 18:48:38 GMT

I have a user on an OpenVZ node, and he gets Disk Quota exceeded for anything he tries to do. He is using 15% of his allocated Disk, but I noticed that when I run /proc/vz/vzquota I see that VE 200 has hit the soft limit.

what is the purpose of that limit? Can't I just remove it? If so, how can I remove it all together?
