Hello,

I installed openvz and one vz run on this server. I import this vz with vzdump.
Now I would create a new vz with this string:
vzctl create 200 --ostemplate centos-5-minimal
But it fails with the following errors
Creating container private area (centos-5-minimal)
Cached os template /vz/template/cache/centos-5-minimal.tar.gz not found
Creation of container private area failed

What can I do?

Thanks for help.
