Hi,

sorry, but I dont understand you.
I downloaded a template.
In the directory "/vz/template/cache/" are
centos-5-i386-minimal.tar.gz
centos-5-x86_64.tar.gz

But when I create a vz I get this message.
Creating container private area (centos-5-minimal)
Cached os template /vz/template/cache/centos-5-minimal.tar.gz not found
Creation of container private area failed
I dont find a template called centos-5-minimal.tar.gz
