You can always migrate w/o using --offline, that would be stop/migrate/start.

Yes we usually support live migration only from older to newer kernels, but not vise versa -- so live migration from 2.6.24 to 2.6.9 will probably fail.

If you want something newer than 2.6.9 but still stable enough I'd recommend using RHEL5-based kernel (i.e. <http://wiki.openvz.org/Download/kernel/rhel5>). Nevertheless 2.6.9-based branch is still supported.
