Subject: Fedora 11 as host

Hello, I have used OpenVZ on a REH5 as host and it is working, but when I use Fedora 11 as host for OpenVZ with the same Kernel, I have a fatal kernel error on boot.

After some search on google and on this forum, I'm not sure OpenVZ can work with Fedora 11. Can you confirm ?

If it should work, I will provide all my config.

Thanks, in advance.
