Subject: Fedora 11 as host
Posted by clacombe on Mon, 12 Oct 2009 19:06:04 GMT

Hello, I have used OpenVZ on a REH5 as host and it is working, but when I use Fedora 11 as host for OpenVZ with the same Kernel, I have a fatal kernel error on boot.
After some search on google and on this forum, I' not sure OpenVZ can work with Fedora 11. Can you confirm ?
If it should work, I will provide all my config.
Thanks, in advance.
