ramjet wrote on Tue, 13 October 2009 17:48: Some command is returning the string "vps-net_add Warning: Device list is empty" and then each word is treated as a network device.

How does your 101.conf and 201.conf files look like?

What does `ls /var/lib/vz/private` output?

Quote: I manually copied files to the host `/var/lib/private/201`

Did something go wrong with your copy command. Above command has no `vz` in path.

It seems you somehow have changed a globally configuration file or setting.

Thx. The command `ls /var/lib/vz/private` returns 101 and 201; my two containers. Also the structure/content of the this two subfolders is fine.

Maybe I wasn't very clear before but what I did was: I was trying to make a sort of clone of a VE on another machine so I copied the files manually. When I saw that I got errors I decided to undo my operation. I restarted the host, destroyed the VE (succesfully) and made a new VE (id: 201). I've never touched container 101 so find it weird it doesn't start anymore.
Below the 201.conf ; which seems okay?

PS: the same error persists when starting both the containers

Thanks in advance
