I'm not an expert on vdump, but it looks like the dump wrote a file and the errors you experienced were not serious unless of course the two files mentioned are very important, which I suspect is not true.

Did you inspect the tar file? e. g tar tzf /mnt/backup/vds/virt3/vzdump-201.tgz

You might consider using the snapshot option of vdump.

`vdump --snapshot 201 --dumpdir`

Jim.
