Hi ,
I wasnt able to inspect /mnt/backup/vds/virt3/vzdump-201.tgz
seens vzdump delete the file if an error happen
so it finish taring the file then delete it .
I couldnt find sulotion so i had to alter vzdump a little so it wont delete the tars on error then
checked the archive after the error wich is ok (the tar is fine)
so i guess my best option is to leave the vzdump altered .
I cant run vzdump --snapshot because its not on LVM .
