I'd like to echo your sentiments here. 2.6.32 is on the horizon, and pretty soon we will be looking at a situation wherein the driver support of 2.6.27 would be insufficient for the loads of new hardware coming out. This is scary and makes me rethink my initial decision to deploy OpenVZ-based solutions.

Can anyone from the project at least give us some reassurance that OpenVZ will be available on the latest kernels soon? Or maybe at least provide a patch to backport drivers from the latest tree to 2.6.27... (if it's at all possible).

Please, someone from OpenVZ speak up...
