Hi,

Thanks for your help, but it still didn't work. In 30 seconds 2500MB limiting the connection of the ip on the vps to 512kbps and adding your line. I also tried adding it to the eth0 interface and it didn't work. I tried with both interfaces and it still didn't work. Also, I noticed you mentioned that the upload is not being limited, but it is. If someone try to download something FROM the VPS, he will be limited, if he tries to upload something TO the VPS, he will be limited, only the ddos is not being limited... And that I have no clue as to why.

Regards,

Eugenio Pacheco
