
Subject: Why umount script runs on VE start?

I have followed the instruction from wiki (http://wiki.openvz.org/Bind_mounts) and set up the mount and umount scripts. When I start the system I see the following error message:

```
vzctl start 101
Starting VE ...
umount: /home/vz/root/101/mnt: not mounted
Error executing umount script /etc/vz/conf/101.umount
```

Here are my scripts:

```
cat 101.mount
#!/bin/bash
mount --bind /test /home/vz/root/$VEID/mnt
cat 101.umount
#!/bin/bash
umount /home/vz/root/$VEID/mnt
```

Thanks for helping.
