Hello,

Sorry bit of mistyping

Im using tar -pczf --numeric-owner /vz/template/cache/CentOS-5.4-i386-ISPCconfig2.tar.gz .

With a dot at the end, while im in the folder /vz/private/#vzid# which my understanding takes all files from that directory and tars them up.

However I will put --numeric-owner at the end and see if that makes any difference.

Thanks,
Ashley
