Subject: Changing the os-template of an existing VE
Posted by vertigo on Tue, 27 Oct 2009 17:29:08 GMT

I have migrated a VE to a new HN, but face the following problem;
On the original HN i used an amd64 template for the VE, on the new i need to use a 32-bit 386
template (debian-5.0)

Is is possible to switch OS template, and thus the binary files of the VE in the new location?

Thanks
