VPS: CentOs

Already I looked for in fórum, but nothing it decided my problem. When qualifying the QUOTA in the WHM, it informs:

Installing Default Quota Databases.....Done

Quotas are now on

Updating Quota Files.....

quotacheck: Can't find filesystem to check or filesystem not mounted with quota option.

quotacheck: Can't find filesystem to check or filesystem not mounted with quota option.

....Done

Resetting quota for vfservc to 500 M

If DISK\_QUOTA = ON ,

```
root@linux [/]# vzctl start 101
```

```
Starting VPS ...
```

```
Initializing quota ...
```

```
vzquota : (warning) block_hard_limit [1153534] < block_current_usage [2168392]
```

```
vzquota : (warning) block_hard_limit [1153534] < block_current_usage [2168392]
```

```
vzquota : (error) Quota on syscall for 101: File exists
```

```
vzquota on failed [3]
```

```
root@linux [/]#
```

How I make to qualify the QUOTA in the VPS?

Thanks!
