Hello,

the question asked is rather vague to answer it precisely.
What exactly is your configuration? What exactly have you tried to do? What kind of errors did
you get?
Without any specific information I only can suggest you to look through existing documents e.g.
 http://forum.openvz.org/index.php?t=msg&th=5501&star t=0&
http://wiki.openvz.org/Venet
http://wiki.openvz.org/Veth

Please be more specific and it may help other people to realize your problem and find an answer.
