---

sorry, was ma fault;

i tried proxmox on debian lenny and proxmox updated the vzctl package to version 3.0.23-1pve3 and it looks like things have changed;

with this version i am not able to start my ve's - switching back to the debian default vzctl version 3.0.22 it works;

with the vzctl version 3.0.22 it looks like only one bridge interface can be used?  
is this correct?
