Hi,

Quote:

Should I configure the iptables?

It's up to you. Configuring iptables has nothing to do with configuring bridge.

Quote:

This is needed? or not?

Quote:

```
#vzctl set 777 --netif_add eth0 --save
```

Of course, it must be done otherwise you cannot add veth777.0 into the bridge.

Quote:

```
# vzctl exec 777 ifconfig eth0 192.168.1.105 netmask 255.255.255.0
```

You assign ip address inside the VE with this command. If you want your VE to use network this command has to be invoked.

Quote:

```
# brctl addif br0 veth777.0
```

You've already invoked this command.

Quote:

```
# vzctl exec 777 ip route add default via 192.168.1.1 dev eth0
```

You may set up the default route inside VE.
