Yes, we've managed to run CT's practically unmodified. Some changes were required for openrc (gentoo init system) and a bit of tweaks in lxc scripts. In general lxc is not polished but looks like it is ready to be used.

And yes - linux-2.6.27-openvz-2.6.27.37-merge.patch.bz2 is on the mirrors. Apply it after 2.6.27-briullov.1. It includes only fixes that could be found in openvz git repository + merge up to 2.6.27.37.
