net/core/dv.c: Export free\_divert\_blk if CONFIG\_VE\_CALLS\_MODULE is defined.

Signed-off-by: Dmitry V. Levin <[ldv@altlinux.org](mailto:ldv@altlinux.org)>

---

I have no idea why ve\_netdev\_cleanup() from kernel/vecalls.c duplicates  
some code from net/core/dev.c, but if both CONFIG\_NET\_DIVERT and  
CONFIG\_VE\_CALLS\_MODULE are defined, then vzmon gets undefined reference  
to free\_divert\_blk symbol. Here is a workaround.
