net/core/dv.c: Export free_divert_blk if CONFIG_VE_CALLS_MODULE is defined.

Signed-off-by: Dmitry V. Levin <ldv@altlinux.org>

I have no idea why ve_netdev_cleanup() from kernel/vecalls.c duplicates
some code from net/core/dev.c, but if both CONFIG_NET_DIVERT and
CONFIG_VE_CALLS_MODULE are defined, then vzmon gets undefined reference
to free_divert_blk symbol. Here is a workaround.
