Hi,

two proposals:

1) you can set the /proc/sys/net/virt\_osrelease to another "uname -r" like:

```
# echo "2.2.13" > /proc/sys/net/virt_osrelease  
# vzctl restart <CTID>
```

!!! to remember after restarting, plz reset the virt\_osrelease to  
!!! default, some containers wont start anymore if the  
!!! virt\_osrelease is set below 2.6.x

```
# uname -r > /proc/sys/net/virt_osrelease
```

2) create simple uname wedge script

Hope this helps.

Bye,  
Thorsten
