
Subject: [solved] New distro on old OpenVZ kernel

Hi,

I'm running the ovzkernel-2.6.9-023stab051.3.i686 kernel on top of CentOS 4.

Since this is a very old kernel, can I not create containers of newer distros that require newer kernels?

I'm asking because when I try to create a container from the precreated Ubuntu 9.04 template I get a "FATAL: kernel too old" message when I start the container.

Is adding a newer kernel number to /proc/sys/kernel/virt_osrelease the suggested solution?

regards,

Mayank
