Subject: Can OpenVZ use Intel VT-d on Nehalem server?

I was wondering if there is any additional benefit to openvz when the intel vt-d virtualization technology is turned on?

What about HyperThreading?

We are currently running openvz through proxmox on an intel nehalem 5520 and with only 6 active VMs, each having mysql, we are facing some load average spikes from less than 1 to over 30. And these spikes happen approximately 5 time a day to once an hour. Other than that the load average remains below 1.

We can't find why this happens.

System run on RAID10 with Adaptec controler....
