Quote:
Should I configure the iptables?

It's up to you. Configuring iptables has nothing to do with configuring bridge.

Quote:
This is needed? or not?

Quote:
`#vzctl set 777 --netif_add eth0 --save`

Of course, it must be done otherwise you cannot add veth777.0 into the bridge.

Quote:
`# vzctl exec 777 ifconfig eth0 192.168.1.105 netmask 255.255.255.0`

You assign ip address inside the VE with this command. If you want your VE to use network this command has to be invoked.

Quote:
`# brctl addif br0 veth777.0`

You've already invoked this command.

Quote:
`# vzctl exec 777 ip route add default via 192.168.1.1 dev eth0`

You may set up the default route inside VE.

I am pained, follow many tutorials and I cant get internet in my virtual machine, Can somebody say the steps? Please
