Ok I found the solution :

The problem is, when you install ovzkernel this way :

```
yum install ovzkernel
```

```
yum install in fact the 32bit and 64bit kernel.
```

The error comes when I try to boot on a 32bit kernel while It's a Centos 64bits.

The right command is to only install the version you need :

```
yum install ovzkernel.x86_64
```
