Hi schogge,

i'm not sure this is exactly your case, but i'm aware about one recent Asterisk problem - it does not close UDP sockets sometimes, and thus after some time you get too many opened sockets => system becomes inoperable, and yes, asterisk restart helps:

<https://issues.asterisk.org/view.php?id=15627>

You can check if this is your situation or not by monitoring:

```
# cat /proc/net/sockstat
```

Hope that helps.
