Subject: Re: openvz linux-headers not found
Posted by Mik0r on Thu, 26 Nov 2009 14:45:32 GMT

I am installing the dahdi-linux drivers to compile asterisk from source.

I was able to find what I needed at: http://wiki.openvz.org/Download/kernel/rhel5/028stab064.7

If I were using an rpm based OS I would have to install the ovzkernel-2.6.18 and ovzkernel-devel for the linux-headers. As far as I know these RPMs wont work on debian 5 as Ive tried using alien to convert to deb and install but it only ended up hosing the OS.
