Hi

I was wondering about a clustered OpenVZ setup on a SAN how I can transfer the VPS on an other node where the data already exists? Is it possible to transfer the RAM without migrating the data on the hard disks?

Just to explain: I know that the SAN has to be mounted as /vz and that /etc/vz files have to be in to /vz/etc/vz on the SAN, but what if I want to migrate VPS 1 from node 1 to node 2 without (re)booting?
