
Subject: OpenVZ + VPS +dhclient

I have installed fedora core 4, followed up with the install of OpenVZ.
Everything seems to work well; however, I have a need to use dhcp rather than static IP addresses. Can I configure a VPS to use dhclient rather than a static ip address? If so how? I tried to:

```
# vzctl enter ###  
# dhclient venet0
```

The guest was never able to contact the dhcp server.

My VPS is also fedora core 4.

Thanks!
