
Subject: rpm in a container question?

Hi Everyone!

I have a small but a very annoying problem... I can't do "rpm" within a container.

Example:

```
# cat /etc/redhat-release
CentOS release 5.4 (Final)
```

```
# uname -r
2.6.18-164.2.1.el5.028stab066.7
```

This command works fine:

```
# rpm --dbpath /vz/root/101/var/lib/rpm -qa
```

While this command shows nothing:

```
# vzctl enter 101
entered into CT 101
# rpm -qa
```

Any hints why?

Thanks in advance,

Michael
