Are you using nfs in the VPs's?

I have just upgraded a machine to the latest kernel - 2.6.18-164.2.1.el5.028stab066.7 - and it crashed each time during container startup. I selected the previous kernel in grub (stab064.7) and it boots fine.

I have limited information available but ask if you want more.

Some screenshots of the crash -
