BTW: The RPM package drbd-8.3.0-3 built fine against the OpenVZ kernel
2.6.18-128.1.1.el5.028stab062.3.

Please correct me if I am misunderstanding something. Otherwise, I am still looking for some advise related to my original question.

Thanks, David[/quote]

Hm, didn't check drbd 8.3.4, but for the *current* version 8.3.6 there's the define "HAVE_LINUX_BYTEORDER_SWABB_H" which drbd should set properly:
- obviously your build fails because of missing "linux/swab.h"
- either your drbd does not find it there (because it's missing, or more likely it is "linux/byteorder/swap.h"), and/or drbd fails to set HAVE_LINUX_BYTEORDER_SWABB_H correctly

The latter probably could be fixed by editing drbd_config.h manually...
