Hello Seokmann,

I would like to tell you that your patch is wrong, at least for
 MegaRAID SATA 150-4 RAID Controller

06:02.0 RAID bus controller: LSI Logic / Symbios Logic MegaRAID (rev 01)
       Subsystem: LSI Logic / Symbios Logic MegaRAID SATA 150-4 RAID Controller
00: 00 10 60 19 16 03 b0 04 01 00 04 01 08 20 00 00
10: 08 00 20 df 00 00 00 00 00 00 00 00 00 00 00 00

As far as I see the 64-bit magic is set, pci(0xA4) == 0x0299 and driver tries to
enable 64-bit DMA. However the controller is not supported 64-bit DMA, and I
still have the same error messages.

Could you please check this issue and update your patch properly.

Thank you,
 Vasily Averin

SWsoft Virtuozzo/OpenVZ Linux kernel team
