Subject: Re: Connection to drivers located on the HN / graphics in container
Posted by andreas2 on Fri, 04 Dec 2009 08:19:18 GMT

Hallo!
Did you find a working solution?
Is it possible to "move" the graphics device to the container,
if you only have one graphics card?
(Assuming direct output of HW-node and container messes it up?)
Is it possible to switch a device between hw-node and container (or different containers) while running (them)?
Perhaps it is possible to define a key (Alt+Fn) to allow automatic mapping (switching) of the device?

thanks, Andrew
