Has anyone else had this issue lately? I've installed openvz a million times (always on Centos 64-bit) and I've never ran into this...

After adding the openvz repo, yum isn't finding the 64 bit kernel at all:

```
#####  
[root@customer ~]# yum install ovzkernel.x86_64  
Loaded plugins: fastestmirror  
Loading mirror speeds from cached hostfile  
* addons: ftp.osuosl.org  
* base: ftp.osuosl.org  
* extras: centosk.centos.org  
* openvz-kernel-rhel5: mirrors.unbornmedia.com  
* openvz-utils: mirrors.unbornmedia.com  
* updates: ftp.osuosl.org  
Setting up Install Process  
No package ovzkernel.x86_64 available.  
Nothing to do  
#####
```

The repo is definitely enabled...

```
#####  
[root@customer ~]# yum repolist  
Loaded plugins: fastestmirror  
Loading mirror speeds from cached hostfile  
* addons: ftp.osuosl.org  
* base: ftp.osuosl.org  
* extras: centosk.centos.org  
* openvz-kernel-rhel5: mirrors.unbornmedia.com  
* openvz-utils: mirrors.unbornmedia.com  
* updates: ftp.osuosl.org  
repo id          repo name          status  
addons           CentOS-5 - Addons  enabled:  0  
base             CentOS-5 - Base    enabled: 2,535  
extras          CentOS-5 - Extras  enabled:  325  
openvz-kernel-rhel5  OpenVZ RHEL5-based kernel  enabled:  14  
openvz-utils      OpenVZ utilities   enabled:   26  
updates          CentOS-5 - Updates  enabled:  278  
repolist: 3,178

```

Anyone have a suggestion? Am I missing something obvious here?
