Hi!
How can I dump(checkpoint) if external mounts there (mounted, because locked)?
vz:
ctl --ckpoint 120
dump 120
ctl destroy 120
dump --restore 120
ctl restore 120
restore 120 says: "Error: undump failed: No such file or dir
Error: mount point is missing: /home/SPACE. Stopping, Unmounting"

ctl mount (for allowing bind-mounts to root)
mount --bind ... .../root/120/home/SPACE
leads to same error msg

thanks, Andrew
