Again (and again): you do not have to use RHEL in order to use RHEL-based kernel. Believe it or not, you can run this kernel on most of the other distros just fine.

Please, stop telling this nonsense. No offense, but I just did short search on what kernels use other distributions:

altlinux: 5.0 (current) branch uses 2.6.27 kernel

suse (11.1): 2.6.27

mandriva: 2.6.26

debian(!): lenny uses 2.6.26

in all modern distributions you should not consider version number as it is.

redhat backports a lot of stuff to that kernel from more modern kernels. other distributions does the same for all packages not only kernel.
