Here is the information the kernel shows:

```
.....  
Creating root device  
mkrootdev: label / not found  
Mounting root filesystem  
mount: error 2 mounting ext3  
mount: error 2 mounting none  
Switching to new root  
switchroot: mount failed: 22  
umount /initrd/dev failed: 2  
Kernel panic - not syncing: Attempted to kill init!
```
