when i compile OFED-1.5-rc6 against the original CentOS 5.4 kernel it works just fine with no errors: `./install.pl -c ofed-all.conf -k 2.6.18-164.el5`

when i compile it against OpenVZ kernel 2.6.18-164.2.1.el5.028stab066.10 it breaks with error: 'system_utsname' undeclared in clntproc.c.

(there could be other errors but it breaks on this one at the moment)

Do you have any other recommendation?
