http://bugzilla.openvz.org/show_bug.cgi?id=651
main idea- why do you want disable ipv6 support?

Most people disable ipv6 for security reasons. In a tight environment many times you don't have a choice.

It would be nice to run a batch of openvz tests after a "rm -f ipv6.ko". And the opposite: with ipv6 enabled and ipv4 disabled

Openvz's target audience may be in those situations.
