Hello OpenVZ Friends, I have just installed my first OpenVZ Server and Im looking for a great
Control Panel to use with it thats easy to install. Im looking for the best free or the lowest price to
does not have a vps create limit. Also, Im looking for one that will allow me to do the following:

Set bandwidth limits per vps
Set RAM Limit per vps
Set network speed per vps
Allow users to change OS without my help
Users able to Start/STOP/Reboot VPS
Users can manage more then one vps in account
Secure Control Panel and bug free.

I was looking at these two panels: SolusVM and HyperVM. But Im still want the help from the real
OpenVZ users. Any helps works!!
