mmm i think this:

you do this

```
#vzctl set 502 --cpuunits 10000 --save
```

Setting CPU units: 10000

```
#vzcpucheck
```

Current CPU utilization: 11000

Power of the node: 160011

you are setting to the VE 502 the cpuunits and you are doing "vzcpucheck" but you dont specify the VE

so maybe vzcpucheck are checking the whole server so you get that values, your 10000 + 1000 of other VE ? or main SERVER ??
