hallo i'm a newbie of openvz..as specified in the subject, i want to transfer my network card eth0 in my vz and i want to disable every others interfaces (venet0, venet0:0...); the first part of the work is ok, but i'm going to become crazy about the second: any big heart man can help me?

S.

oh..i'm using debian lenny in both the physical and the virtual machines.
